Warren County Community College

CSC 121 Programming I
Course Master Syllabus

Course Information

Catalog Description: This course provides an introduction to computer programming and concepts using a high-level programming language. Students will write, compile, and debug programs, while learning the basic syntax and constructs of the language, including data types variables, functions, control statements, file I/O, and algorithm design. Object-oriented programming concepts will also be introduced.

Prerequisite(s): None

Corequisite(s): CSC 103 – Intro to Computing

Credits: 3

Hours: 2 lecture and 2 lab

Required Text(s): MindTap Computer Science for Lambert's *Fundamentals of Python: First Programs*; MindTap for Lambert's *Fundamentals of Python: Data Structures*

Program Goals

1. Demonstrate foundational knowledge of computer systems, including their components, functions, and applications.
2. Apply fundamental technology skills to solve problems and complete tasks in various computing environments.

3. Apply programming principles to solve problems using modern development tools.
4. Analyze and manage data communications and networking systems.
5. Apply critical thinking and data analysis techniques to solve computational problems and make informed decisions.
6. Design and develop interactive web content and apps using modern programming languages and development tools

Class Core Competencies

The following core competencies are embedded in this curriculum:

- Communicate effectively in both speech and writing
- Use scientific method of inquiry, through the acquisition of scientific knowledge
- Use computer systems or other appropriate forms of technology to achieve educational and personal goals
- Understand ethical issues and situations
- Address an information need by locating, evaluation and effectively using information.

Class Learning Assessment

Student Learning Outcomes	Suggested Means of Assessment
Describe the arithmetic, comparison, and logical operators of programming language	Quizzes
Differentiate between syntax, runtime, and logic errors	Quizzes, lab assignments
Identify/describe the 4 principles of Object Oriented Programming: encapsulation, data abstraction, polymorphism, and inheritance	Quizzes, lab assignments/projects
Use a text editor/IDE to write and compile simple programs, call subprograms, pass data, and return results	Lab assignments/projects

Student Learning Outcomes	Suggested Means of Assessment
Employ conditional logic and control program flow	Lab assignments/projects
Manipulate character strings; perform data input and output	Lab assignments/projects
Apply variables, selection, looping statements and construct one-dimensional arrays	Lab assignments/projects

Grading System

Letter Grade	Percentage Range
A	90 to 100 percent
B Plus (B+)	87 to 89.9 percent
B	80 to 86.9 percent
C Plus (C+)	77 to 79.9 percent
C	70 to 76.9 percent
D	60 to 69.9 percent
F	Below 60 percent

Statement and Policy on Cheating, Plagiarism, and Academic Conduct
Academic Conduct Policy (Policy 304) [PDF]

Students are required to perform all the work specified by the instructor and are responsible for the content and integrity of all academic work submitted. A violation of academic integrity will occur if a student: (1) knowingly represents work of others as one's own, (2) uses or obtains unauthorized assistance in any academic work, (3) gives fraudulent assistance to another student, or (4) furnishes false information or other misuse of college documents.

Unauthorized use of Artificial Intelligence (AI) is prohibited unless the instructor explicitly permits it in the syllabus or assignments. If tools such as ChatGPT are permitted by an

instructor to be used for an assignment, they should be used with caution and with proper citation. In all such cases, you may only use the specific tools identified as acceptable and you must adhere to the College's standards for attribution, validation, and transparency.

In cases of suspected violation of academic integrity, the incident is to be reported to the Office of Academics. A student found guilty of violating the rule of academic integrity by the Vice President of Academics will be considered to have failed in personal obligation to the College; such failure will be subject to disciplinary action by the College. Unless otherwise notified, the instructor will allow students who are pending disciplinary action to attend class.

Citation Styles and Formatting

Work submitted for any Warren County Community College course must conform to the required formatting and citation style that are specified by the instructor. The Library and Instructional Support Center can assist students with formatting and citations for assignments and papers.

WCCC Attendance Expectations

The College expects students to attend and participate in all classes. This involves sharing discussions and lectures in class, as well as interacting with other students. Grades are based on the quality of work students complete in meeting the requirements for a particular course, as stated in the course syllabus and catalog description. Attendance, among other factors, may be an additional criterion for assigning grades. Students should realize that they are responsible for all class meetings and that work missed because of absences may affect their grades. Attendance in online classes is determined by the completion of assignments/ tests. Students who have not completed any assignments or tests will be considered non-attending and receive an NF grade in online classes.

Class Attendance Expectations

Topical Outline

- How to write the first Python programs
- How to code control statements
- How to define and use functions and modules
- How to test and debug a program
- How to work with lists and tuples
- How to work with file I/O
- How to handle exceptions
- How to work with numbers
- How to work with strings
- How to work with dates and times
- How to work with dictionaries
- How to work with recursion and algorithms
- How to define and use your own classes
- How to work with inheritance
- How to design an OO
