Warren County Community College

ETR 204 Applied Industrial Robotics

Course Master Syllabus

Course Information

Catalog Description: This course introduces the basic concepts of Industrial Robotics. Students will receive a hands-on introduction to concepts that range from design of basic robot cells and work envelopes to setting up and programming industrial robot arms and collaborative robots (COBOTS). They will also receive hands-on instruction in the setup and design of various end-effectors and sensors that make up a modern industrial robotic system.

Prerequisite(s): ETR 102 Introduction to Mechatronics
ETR 110 Introduction to Electronics
ETR 105 Introduction to Industrial Control Systems

Corequisite(s):

Credits: 3

Hours: 3 hours of mixed, lecture +lab

Required Text(s): *Industrial Robotics Fundamentals*, 4th ed., Larry T. Ross et al. | ISBN-10: 1649259786

Supplemental Materials:

Program Goals

1. Equip students with a strong theoretical and applied understanding of robotics, mechatronics, automation, and AI, ensuring they are well-prepared for industry and further education.

2. Develop expertise in the structure, design, components, and subassemblies that make up robotic and automated systems, including motion control, sensors, actuators, and AI integration.
3. Provide hands-on experience to ensure proficiency in troubleshooting, diagnosing, and optimizing complex robotic and automation systems.
4. Ensure students acquire an applied understanding of manufacturing automation, including the tools, practices and processes involved in robotic and automated manufacturing.
5. Develop a hands-on understanding of the interrelation between mechatronic, robotic and automation hardware and software; foster technical proficiency in programming and interfacing robotic systems with AI-driven automation tools, ensuring adaptability in a rapidly advancing field.

Class Core Competencies

The following core competencies are embedded in this curriculum:

- Communicate effectively in both speech and writing.
- Apply appropriate mathematical and statistical concepts and operations to interpret data to solve problems.
- Use computer systems or other appropriate forms of technology to achieve educational and personal goals.
- Address an information need by locating, evaluating, and effectively using information.

Class Learning Assessment

Student Learning Outcomes	Suggested Means of Assessment
Successfully able to identify various parts and sub-assemblies of an industrial robot arm	Hands-on lab exercises and quizzes
Successfully identify commonly-deployed types of industrial robot arms	Hands-on lab exercises and quizzes
Bench test various types of electro-mechanical and mechanical actuators	Hands-on lab exercises
Bench test various sensors and vision systems used in industrial robotics	Hands-on lab exercises

Student Learning Outcomes	Suggested Means of Assessment
Successfully program a COBOT to accomplish specific industrial tasks	Hands-on lab exercises and group project
Successfully program an industrial robot controller to accomplish specific tasks	Hands-on lab exercises

Grading System

Letter Grade	Percentage Range
A	90 to 100 percent
B Plus (B+)	87 to 89.9 percent
B	80 to 86.9 percent
C Plus (C+)	77 to 79.9 percent
C	70 to 76.9 percent
D	60 to 69.9 percent
F	Below 60 percent

Statement and Policy on Cheating, Plagiarism, and Academic Conduct
Academic Conduct Policy (Policy 304) [PDF]

Students are required to perform all the work specified by the instructor and are responsible for the content and integrity of all academic work submitted. A violation of academic integrity will occur if a student: (1) knowingly represents work of others as one's own, (2) uses or obtains unauthorized assistance in any academic work, (3) gives fraudulent assistance to another student, or (4) furnishes false information or other misuse of college documents.

Unauthorized use of Artificial Intelligence (AI) is prohibited unless the instructor explicitly permits it in the syllabus or assignments. If tools such as ChatGPT are permitted by an instructor to be used for an assignment, they should be used with caution and with proper citation. In all such cases, you may only use the specific tools identified as acceptable and you must adhere to the College's standards for attribution, validation, and transparency.

In cases of suspected violation of academic integrity, the incident is to be reported to the Office of Academics. A student found guilty of violating the rule of academic integrity by the Vice President of Academics will be considered to have failed in personal obligation to the College; such failure will be subject to disciplinary action by the College. Unless otherwise notified, the instructor will allow students who are pending disciplinary action to attend class.

Citation Styles and Formatting

Work submitted for any Warren County Community College course must conform to the required formatting and citation style that are specified by the instructor. The Library and Instructional Support Center can assist students with formatting and citations for assignments and papers.

WCCC Attendance Expectations

The College expects students to attend and participate in all classes. This involves sharing discussions and lectures in class, as well as interacting with other students. Grades are based on the quality of work students complete in meeting the requirements for a particular course, as stated in the course syllabus and catalog description. Attendance, among other factors, may be an additional criterion for assigning grades. Students should realize that they are responsible for all class meetings and that work missed because of absences may affect their grades. Attendance in online classes is determined by the completion of assignments/ tests. Students who have not completed any assignments or tests will be considered non-attending and receive an NF grade in online classes.

Class Attendance Expectations

Topical Outline

1. Introduction to Industrial Robotics
2. Work Cells, Work Envelopes and Workflow design

3. Basic Structure of an Industrial Robot arm
4. Types of Robot Arms: Articulated, Selective Compliance Assembly Robot Arm (SCARA), Parallel
5. Actuators: Steppers, closed-loop servos, pneumatics and hydraulics
6. Reduction gearing and counterbalances
7. Encoding: rotary and quadrature
8. Programing Robotic Controllers: Fanuc, Fagor, KUKA
9. End of Arm Tooling (EOAT) and End Effectors
10. Collaborative Robots (COBOTS)
